INSTALLATION NOTES:

Remisafe Flex hinged doors can be installed in new and remodeled walk-in coolers. No anti-sweat is required with our design. For new coolers, shelving must be placed after doors have been installed and adjusted. For remodels, shelving must be relocated until after doors are installed and adjusted. Most installations are complete in 1 day (by trained technicians) and can be done overnight to minimize disruption at your store. For proper and efficient installation, the walk-in cooler opening MUST be level, plumb, and structurally self-supporting. Remis America will do all required LV electrical wiring (LEDs). A licensed electrician must make the final connection to HV. Remis America warranties our product for 12 months from the date of shipment. This warranty is limited to repair or replacement, at Remis America's discretion. See warranty agreement for complete details.
